The term structural concrete indicates all types of concrete and in structural applications. Structural concrete may be plain, prestressed, or partially prestressed concrete; in addition, concrete is used in composite design. Composite design is used for any structural member, such as beams or columns, when the member contains a combination of concrete and steel shapes.

The FCM proposed by Hillerborg, Modeer, and Petersson (1976) for studying crack formation and crack growth in concrete brought two new concepts to the study of concrete fracture: the physical presence of an FPZ ("microcracked zone" in their original words) in front of an open crack due to strain localization and a constitutive law for crack propagation stipulating the relations between the cohesive forces and the crack-opening displacement (COD) inside the FPZ—in other words, the ...

Unified Theory of Concrete Structures develops an integrated theory that encompasses the various stress states experienced by both RC & PC structures under the various loading conditions of bending, axial load, shear and torsion. Upon synthesis, the new rational theories replace the many empirical formulas currently in use for shear, torsion and membrane stress.
