A dark epic fantasy series, where one woman's thirst for revenge and struggle with her inner demons will put the entire world in jeopardy. The only thing twenty-one year old Adrastine wants is revenge against her depraved father-but when she tries to kill him, she is caught and thrown into a holy war for a god she doesn't believe in. But disaster is coming, and all Adrastine's problems will seem minor by comparison. Someone, or something, is draining the planet's lifeblood, killing the land and everything on it at an alarming rate. Jacob is a shelon, a man who can wield magic, and a spy dispatched by Queen Valtice to find The Rose of Nerine - the only one who can stop the rape of the land and save the people. But when Jacob finds Adrastine, he can't convince her that she is The Rose, let alone to leave her home and journey with him across the tempestuous sea to Nerine. Adrastine is drawn to Jacob, despite their differences. But that is a dangerous path, as he is an unwelcome distraction to her quest for revenge. And if she learns his secrets, it will cement her hatred of men forever, weakening powers she is only just learning she has, powers needed to save their world.

Acute Rheumatic Fever and Rheumatic Heart Disease is a concise, yet comprehensive, clinical resource highlighting must-know information on rheumatic heart disease and acute rheumatic fever from a global perspective. Covering the major issues dominating the field, this practical resource presents sufficient detail for a deep and thorough understanding of the latest treatment options, potential complications, and disease management strategies to improve patient outcomes. Divided into four distinct sections for ease of navigation: Acute Rheumatic Fever, Rheumatic Heart Disease, Population-Based Strategies for Disease Control, and Acute and Emergency Presentations. International editors and chapter authors ensure a truly global perspective. Covers all clinical aspects, including epidemiology, pathophysiology, clinical features, diagnosis, management, and treatment. Includes key topics on population-based measures for disease control for effective primary, secondary, and tertiary prevention. Consolidates today's available information and guidance into a single, convenient resource.

The Universal Soil Loss Equation (USLE) enables planners to predict the average rate of soil erosion for each feasible alternative combination of crop system and management practices in association with a specified soil type, rainfall pattern, and topography. When these predicted losses are compared with given soil loss tolerances, they provide specific guidelines for effecting erosion control within specified limits. The equation groups the numerous interrelated physical and management parameters that influence erosion rate under six major factors whose site-specific values can be expressed numerically. A half century of erosion research in many States has supplied information from which at least approximate values of the USLE factors can be obtained for specified farm fields or other small erosion prone areas throughout the United States. Tables and charts presented in this handbook make this information readily available for field use. Significant limitations in the available data are identified.

The Wuffie is a mythical creature living deep in a forest and is unknown by the creatures of that forest or anyone else in the world. This story tells of his discovery and the beginning of what will be many tales of his adventures.
