This book encapsulates my learning of Mathematics from the period when I was in Primary School to now in Junior College. From appreciating proofs to understanding the history of Mathematics, Mathematicians and their contributions, I gradually understood its importance not just as a subject, but something which connects us with the real world. It features the many conversations I had with my parents, friends and teachers across time regarding Mathematics and how they have impacted me. The book is a great learning resource for students who wish to learn more about Mathematics through my personal experiences and hopefully, be influenced by my 18-year journey.

This course book follows an approach that supports the new 2007 syllabus (to be first examined in 2009) while including the wider aims of the IB through connections to TOK, international-mindedness and the IB learner profile. It has been written by a former chief examiner for IB Diploma Programme Biology and has been extensively reviewed by teachers, consultants and the IB. With features and activities that encourage active learning and critical thinking, students will find this book stimulating and engaging.

"This most extraordinary edition celebrates Michelangelo's graphic work with a selection of his most masterful and mesmerizing of drawings" Graphic beauty Breathtaking drawings Few artists can claim such tenacious fame across continents and centuries as Michelangelo Buonarroti (1475'1564). His achievements as a sculptor, painter, draftsman, and architect remain unrivalled and unique. This fresh edition celebrates the artist's graphic work, with a selection of his most masterful and mesmerizing drawings. Gathered from some of the world's most prestigious collections, these works show the full ambition and reach of Michelangelo's practice, spanning architectural elements, facial expressions, and countless, meticulous anatomical drawings. Whether finely tuned or left unfinished, each and every drawing testifies to the artist's dedicated scrutiny of the world around him and his compelling mastery of line, form, and detail. There is an intimacy in these works, too. As differ

Endorsed by Cambridge International Examinations, Cambridge O Level Economics Workbook is designed to help learners develop their understanding of economics, to build up skills and to enable them to assess their progress. The workbook can be used in conjunction with the Cambridge O Level Economics textbook (ISBN 9781107612358) by the same author but may also be used independently. It is divided into eight sections which correspond to the sections of the syllabus and the textbook. Each section, in turn, is divided into ten parts.

The George Hicks Collection focuses on four main subject areas - Southeast Asia, China, Japan and overseas Chinese - spanning the disciplines of history, sociology, economics, political science and anthropology. The body of works in the Collection reveals Mr Hicks' profound interest in Asia and his scholarly pursuits over the decades.

A textbook suitable for undergraduate courses. The materials are presented very explicitly so that students will find it very easy to read. A wide range of examples, about 500 combinatorial problems taken from various mathematical competitions and exercises are also included.

Samakrta-Subodhini: A Sanskrit Primer marks the culmination of Professor Deshpande's experience of teaching Sanskrit at the University of Michigan for over twenty-five years. Tested in classes at Michigan and elsewhere and successively improved for over twenty years, the teaching materials in the book now offer an effective tool to learn and teach Sanskrit. It aims at teaching Sanskrit as a language, rather than as a religious or mystical entity. It also simplifies the process of learning Sanskrit by dissociating this language-learning process from the heavy burdens imposed both by the tradition of Indo-European linguistics and the tradition of indigenous Sanskrit grammarians in India. By treating Sanskrit as a productive language, rather than as a dead language merely to be deciphered, the book represents a significant advance over the traditional Western approach to the study of Sanskrit. Work on this book began in 1976, and now almost two generations of Professor Deshpande's students have used successively improved versions. The book's examples include many modified versions of classical Sanskrit passages from epic texts such as The Mahabharata and The Ramayana. The book also contains examples from Hindu, Buddhist, and Jain traditions, as well as samples of Sanskrit poetry and satire. Madhav M. Deshpande is Professor of Sanskrit and Linguistics in the Department of Asian Languages and Cultures, University of Michigan, where he has been on the faculty since 1972. His research relates to the fields of Paninian linguistics, historical linguistics, and sociolinguistics, as well as the cultural and linguistic history of India. Besides his research publications, Professor Deshpande has participated in Sastric and literary debates in Sanskrit and has also published Sanskrit poems and plays.
