The implementation of Safety Management Systems at international airports was one of the most considerable changes in the regulatory framework for the operation and licensing of aerodromes in recent years. However, even more than five years after its inception it appears that the high expectations ICAO has placed on what has been designed as paradigm shift in the way of doing business in the airport industry were not materializing and Safety Management Systems appear at best to only marginally impact the safety performance of airports. Based on the lessons learned from the implementation of SMS in Germany an ideal organizational set-up for a most effective aerodrome SMS shall be designed. This proposal of an ideal organizational set-up shall be validated through a model implementation at a representative airport and subsequent long term observation in live operation. This model implementation serves as a basis from which recommendations for a future European regulation of Aerodrome Safety Management Systems under the EASA system shall be derived.

Submissions include brief case studies, longer scholarly works from respected academics, and professional reflections from individuals who have made important contributions to their field. The book includes academic chapters that explore the topic from a more theoretical standpoint yet are accessible and understandable to a professional audience. These are complemented by both broad and specific practice examples that describe initiatives and applications occurring in the industry around the three themes. All submissions include descriptive insights, experiences, and first-hand accounts of accomplishments, intended to support the work of other professionals managing NGAP issues. This work will be valuable to anyone involved in attracting, educating, or retaining NGAP, including academics, operators, national and international regulators, and outreach coordinators, among many others.
