The fifth and final book in the epic Chaos Queen series. "Perfect for fans of Daniel Abraham and Brandon Sanderson." (Library Journal on Duskfall). Nothing is as it seems. Sfaera-shattering revelations reveal there is more to the Nine Daemons—and Canta—than anyone could have imagined, and deep in the heart of Triah, a threat that has lurked below the surface for years finally rises, gathering unimaginable power. Knot, still reeling from a shocking death, tries to put himself back together in time to fight. Two ex-Nazaniin assassins, Code and Kali, form an unlikely alliance. Cinzia, more suspicious than ever of her sister Jane Oden—Canta 's prophettess—rallies as many people as she can to save the Sfaera from imminent destruction. And Winter, the Chaos Queen herself, realizes she must finally choose sides and face the greatest test of her life: finding the humility to seek help. Deep in the heart of Triah, a threat that has lurked below the surface for years finally rises, gathering unimaginable power. Only the unlikely alliance formed between the two former Nazaniin assassins, Code and Kali, stands in its way. Characters old and new join forces to preserve life as they know it. The darkest night the Sfaera has ever known is about to end, but whether it ends in daylight or destruction remains to be seen.

Driven by new regulations, new market structures, and new energy resources, the smart grid has been the trigger for profound changes in the way that electricity is generated, distributed, managed, and consumed. The smart grid has raised the traditional power grid by using a two-way electricity and information flow to create an advanced, automated power supply network. However, these pioneering smart grid technologies must grow to adapt to the demands of the current digital society. In today 's digital landscape, we can access feasible data and knowledge that were merely inconceivable. This Special Issue aims to address the landscape in which smart grids are progressing, due to the advent of pervasive technologies like the Internet of Things (IoT). It will be the advanced exploitation of the massive amounts of data generated from (low-cost) IoT sensors that will become the main driver to evolve the concept of the smart grid, currently focused on infrastructure, towards the digital energy network paradigm, focused on service. Furthermore, collective intelligence will improve the processes of decision making and empower citizens. Original manuscripts focusing on state-of-the-art IoT networking and communications, M2M communications, cyberphysical system architectures, big data analytics or cloud computing applied to digital energy platforms, including design methodologies and practical implementation aspects, are welcome.
